

Annual Drinking Water Quality Report

CITY OF SEYMOUR

Public Water System ID: TX0120001

We are pleased to present to you the Annual Water Quality Report (Consumer Confidence Report) for the year, for the period of January 1 to December 31, 2025. This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water. Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono (940) 889-3148.

We need your voice! Please join us at City Hall on the third Thursday of each month for the city council meeting to help shape our water quality decisions.

For more information regarding this report, contact:

Name: John Davis

Phone: 940-889-3148

Sources of Drinking Water

CITY OF SEYMOUR provides groundwater from the Seymour Aquifer located in Baylor County.

Our water source(s) and source water assessment information are listed below:

Source Name		Type of Water	Report Status	Location
1 - SHIPMAN LEASE	SHIPMAN	Ground water	COMPLETED	Can be viewed at City Hall
1- HARRIS LEASE		Ground water	COMPLETED	Can be viewed at City Hall
10 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
10A - IN TOWN		Ground water	COMPLETED	Can be viewed at City Hall
11 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
11B		Ground water	NOT COMPLETED	
12 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
12B - IN TOWN		Ground water	COMPLETED	Can be viewed at City Hall
13 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
13B - IN TOWN		Ground water	COMPLETED	Can be viewed at City Hall
14 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
17 - SHIPMAN LEASE		Ground water	COMPLETED	Can be viewed at City Hall
18 - SHIPMAN LEASE		Ground water	COMPLETED	Can be viewed at City Hall
19 - SHIPMAN LEASE		Ground water	COMPLETED	Can be viewed at City Hall

2 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
2B - IN TOWN		Ground water	COMPLETED	Can be viewed at City Hall
3 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
3B - IN TOWN		Ground water	COMPLETED	Can be viewed at City Hall
4 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
4B		Ground water	NOT COMPLETED	
5 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
6 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
7 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
7A - COMPRESS RD		Ground water	COMPLETED	Can be viewed at City Hall
8 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
8A - COMPRESS RD		Ground water	COMPLETED	Can be viewed at City Hall
9 - HARRIS LEASE	HARRIS LEASE	Ground water	COMPLETED	Can be viewed at City Hall
9A - COMPRESS RD		Ground water	COMPLETED	Can be viewed at City Hall
GW FROM BAYLOR WSC	I/C WITH TX0120004	Ground water	COMPLETED	Can be viewed at City Hall
RAW WATER FROM BAYLOR WSC	CC FROM TX0120004 BAYLOR WSC	Ground water	COMPLETED	Can be viewed at City Hall

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791. Contaminants that may be present in source water include:

Microbial Contaminants - such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic Contaminants - such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides - which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic Chemical Contaminants – including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

Radioactive Contaminants – which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. CITY OF SEYMOUR is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact CITY OF SEYMOUR at 940-889-3148. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <https://www.epa.gov/safewater/lead>.

A service line inventory has been prepared and can be accessed at the City of Seymour Water Department, located at 410 W. Nevada, between the hours of 8 AM and 4 PM, Monday through Friday.

In the tables below, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Treatment Technique or TT: A required process intended to reduce the level of a contaminant in drinking water.

Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Avg: Average - Regulatory compliance with some MCLs are based on running annual average of monthly samples.

RAA: Running Annual Average.

LRAA: Locational Running Annual Average.

mrem: millirems per year (a measure of radiation absorbed by the body).

ppb: micrograms per liter (ug/L) or parts per billion - or one ounce in 7,350,000 gallons of water.

ppm: milligrams per liter (mg/L) or parts per million - or one ounce in 7,350 gallons of water.

picocuries per liter (pCi/L): picocuries per liter is a measure of the radioactivity in water.

na: not applicable.

Disinfectant Residual

All public water systems in Texas are required to disinfect drinking water to ensure control of microbial contaminants. Disinfectants are water additives used to control microbes.

Disinfectant	Year	Average Level	Unit	Range	MRDL/MRDLG Goal
Chlorine	2025	1.08	ppm	0.42 - 2.07	4/4

Regulated Contaminants

In the tables below, we have shown the regulated contaminants that were detected. Chemical Sampling of our drinking water may not be required on an annual basis; therefore, information provided in this table refers back to the latest year of chemical sampling results.

Lead and Copper	Period	90TH Percentile: 90% of your water utility levels were less than	Range of Sampled Results (low - high)	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2025	0.0932	0.0163 - 0.1062	ppm	1.3	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD	2025	1.1	0 - 1.3	ppb	15	0	Corrosion of household plumbing systems; Erosion of natural deposits

Disinfection Byproducts	Sample Point	Period	Highest LRAA	Range	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	601 SOUTH FOLEY, SEYMOUR	2025	5	4.7	ppb	60	0	By-product of drinking water disinfection
TTHM	601 SOUTH FOLEY, SEYMOUR	2025	17	17.4	ppb	80	0	By-product of drinking water chlorination

Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
ARSENIC	3/11/2025	1.3	1.3	ppb	10	0	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
BARIUM	3/11/2025	0.028	0.028	ppm	2	2	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
DIBROMOCHLOROMETHANE	5/20/2025	5.65	1.37 - 5.65	UG/L	N/A	0.06	
FLUORIDE	2/9/2023	0.73	0.73	ppm	4	4	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
NITRATE	10/27/2025	9.33	7.24 - 9.33	ppm	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits

Radiological Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
COMBINED URANIUM	3/23/2021	14.8	14.8	µg/L	30	0	Erosion of natural deposits
GROSS ALPHA, EXCL. RADON & U	3/23/2021	1	1	pCi/L	15	0	Erosion of natural deposits
GROSS ALPHA, INCL. RADON & U	3/23/2021	11.1	11.1	pCi/L	N/A	0	Erosion of natural deposits

Violations

During the period covered by this report we had the below noted violations.

Violation Period	Analyte	Violation Type	Violation Explanation
10/1/2025 - 10/31/2025	REVISED TOTAL COLIFORM RULE (RTCR)	MONITORING, ROUTINE, MAJOR (RTCR)	Failed to collect routine coliform samples

Corrective Action: We collected every required coliform sample in November 2025 and are no longer in violation.

Additional Required Health Effects Language:

Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice from your health care provider.

There are no additional required health effects violation notices.

Monitoring Violations Annual Notice – Template 3-1B

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Monitoring Requirements Not Met for City of Seymour

Our system failed to collect every required coliform sample. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During October 2025 we did not monitor or test for coliform bacteria and therefore cannot be sure of the quality of your drinking water during that time.

What should I do?

There is nothing you need to do at this time. You may continue to drink the water. If a situation arises where the water is no longer safe to drink, we are required to notify you within 24 hours.

What is being done?

We collected every required coliform sample in November 2025 and are no longer in violation.

For more information, please contact John Davis at 940-889-3148 or stop by City Hall located at 301 N. Washington.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Seymour. Public Water System ID#: TX0120001.
Date distributed: June 8, 2026.
